`Node.Js` `JavaScript` `Docker` `MongoDb` `GraphQL` `Postgres` `Domain Driven Design ( DDD )`
`TypeScript` `Express` `Python` `SQL` `SOLID` `React` `Amazon Web Services ( AWS )`
`Design Patterns` `Next.js` `Git` `NoSQL` `Html` `CSS` `Systems Design` `RabbitMq` `Clean Code`
`Clean Architecture` `Prisma ORM`

WORK EXPERIENCE

Full Stack Software Engineer
Workana - the most important freelance marketplaces in the world.

01/2021 - Present   *Remote*

Freelancing has given me opportunities to work on a variety of real-world problems, so I've had the opportunity to face them and learn from them.

Achievements/Tasks

- Migrating a local application to the AWS cloud. I decoupled it and transformed it into a fully serverless application with **zero cost** and database query optimization.
- Mentoring the development of an application architecture, as well as which technologies to use, data flow, relationship and decoupling between components, how to modify the project without causing collateral damage, using **clean code** and **clean architecture** with **unit** and **integration tests**. As well as how to use **emotional intelligence** for leadership in their team.
- **Automating** the generation of a meeting attendance report during the pandemic period, with integration to excel and software to mute and unmute the speaker's microphone.
- Integrating a payment service with an **API**, which communicates with different contexts within a company using universal language, entities, value objects, DTOs, domain events, and **design patterns**.
- Developing a **Web Scraper** to provide data to a bot to publish discounts on a discord server. When a member of the group clicked on the bot's ad, he was marked as having found the discount through the bot and thus was fitted into a type of persona based on which type of ad he clicked on.

Web Development Intern
Inova Tech Digital - ecosystem of digital solutions to boost business on the internet.

06/2020 - 12/2020   *Remote*

Achievements/Tasks

- Hands-on with website development using the react framework for the interface and Node.js for the backend with databases such as MySQL and Postgres.
- Participated in brainstorming sessions to contribute ideas for new features and improvements.
- Creationed and maintained detailed project documentation.
